

PROJECT PROFILE

LIBERTY INDUSTRIAL

The project for Liberty located within the Rio Tinto Gove facility includes the design, manufacture, transport, installation, and commissioning of a comprehensive 60-man complex. The facility features nine site/prestart offices with 12 verandahs, two meeting rooms, seven crib rooms, a dome shelter, and male and female ablution areas.

To deliver a high-quality, efficient, and smooth onboarding process, we meticulously coordinated flights and accommodations, collated all safety documentation, and completed inductions for all employees and subcontractors. The project also required extensive planning and reconnaissance due to the challenging terrain of this remote peninsula, ensuring the successful transportation of all modules. Our commitment to detailed planning and execution ensured the project's seamless integration and operational efficiency.
